

PCM is one of the world's leading manufacturers of positive displacement pumps and advanced fluid-handling equipment. The company was founded in 1932 by René Moineau, the inventor of the Progressing Cavity Pump.

PCM Vulcain™

Key benefits

Steady & efficient production

- Outperforms beam pumps in overall system efficiency
- Less fragile than electric submersible pumps
- Very efficient at low submergence
- Handles highly viscous fluid without rod falls

Lower lifecycle costs

- Lower CAPEX than rod or submersible pumps
- Low workover costs
- Reduces installation and operating complexity

Reduced environmental impact

- Highly energy efficient operation
- Seal packing prevents site contamination due to leakage
- Smaller footprint reduced impact on landscap
